HONORARY DEGREES: Honorary Doctor of Philosophy, University of Uppsala (Sweden) 1995  
Honorary Doctor of Letters, Emory University, 1997

Biographical Statements in Various Directories.

### RESEARCH AND ACADEMIC EXPERIENCE:

Most of my scholarship has focused on institutional change within and across countries. There have been two major questions which I have raised in my work (1) why do particular institutional arrangements and specific types of organizations emerge, and (2) what consequences follow from these institutional and organizational arrangements. I have published extensively on these two questions. For some years, most of my research and teaching have been not only historical but comparative in nature. While I have concentrated primarily on the study of American society, my work during the past fifteen years has focused primarily on twentieth century Europe and the United States.

I have been engaged in a complex, cross national and historical research agenda which attempts to explain why countries vary in their capacity to be innovative in science-based industries during the twentieth century. This research brings together the theoretical perspectives of my previous scholarship on institutional

analysis, industrial sectors, major discoveries in biomedical science, and the governance of capitalist economies.
